Industry Overview of Industrial Robots

According to International Federation of Robotics (IFR)'s research in 2018, the estimated annual worldwide supply of industrial robots is 14% on average per year and the average robot sales was increased by 19% per year (CAGR) between 2012 and 2017. Asia is still the world's strongest growth market. With a total of about 261,800 units sold in 2017, a rise of 37% more than the global sales volume of 2015 (253,300) was reached in this region. There are five major markets representing 73% of the total global sales volume in 2017: China, Japan, South Korea, the United States and Germany. Since 2013 China has been the biggest robot market in the world with a continued dynamic growth. Despite the strong growth, China has a relative low robot density of 97 units per 10,000 workers, compared to market leaders like South Korea, Singapore and Germany. With the presence of the world's most active industrial sector and initiatives, China is expected to lead the demand for robots use in the next few years.

The global AGV market size was valued at USD 2.49 billion in 2018 and is projected to expand at a CAGR of 15.8% from 2019 to 2025, and is expected to reach USD 7.28 billion by 2025. The Chinese AGVs sales volume and revenue are expected to expand at a CAGR of 30.3% and 25.0% from 2013 to 2020; the Asia Pacific regional market is projected to expand at the highest CAGR of 17.0% from 2019 to 2025. A majority of the factories have been trying to minimize human intervention and the scope for errors while increasing productivity in the domain.

- Rapid growth of e-commerce is leading to the growth of market
- The increasing need for automation in maritime applications is a key driver for the market
- Growing implementation of robotic cargo carrier result in a reduction in operational cost, enhanced workforce safety, and decrement in production time
